

Data  $\Rightarrow 1001 \Rightarrow 4\text{bits} \Rightarrow m=4$

1# Find Number of parity Bits required.

Formula  $\Rightarrow 2^p \geq m+p+1$ ,  $p \Rightarrow$  No. of Parity Bits

Let  $p=2$

$$2^2 \geq 4+2+1$$

$$X \boxed{4 \geq 7}$$

Let  $p=3$

$$2^3 \geq 4+3+1$$

$$\boxed{8 \geq 8}$$

$$\boxed{\text{So, } p=3}$$

$$\boxed{\text{Total Code Bits} \Rightarrow 4+3 = 7}$$

2#

Bit Designation	$P_1$	$P_2$	$M_1$	$P_3$	$M_2$	$M_3$	$M_4$
Bit Position	1	2	3	4	5	6	7
Binary Position No.	001	010	011	100	101	110	111
Information Bits			1		0	0	1
Parity Bits	-	-		-			

3# Parity Bits are located in the position that are numbered corresponding to ascending power of two ( $2^0, 2^1, 2^2, 2^3, 2^4$ )  
 $\Rightarrow 1, 2, 4, 8, 16$

$P_1 \Rightarrow$  checks bit position 1, 3, 5, 7, and must be 0, in order to have an even number of 1's.

$$\begin{array}{cccc} 1 & 3 & 5 & 7 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ P_1 & 1 & 0 & 1 \end{array}$$

$\Rightarrow$  Even. No. of 1s are there  
 $\boxed{\text{So } P_1 = 0}$

$P_2 \Rightarrow$  checks Bit Position

$$\begin{array}{cccc} 2, & 3 & 6 & 7 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ P_2 & 1 & 0 & 1 \end{array}$$

$$\boxed{P_2 = 0}$$

$P_3 \Rightarrow$

$$\begin{array}{cccc} 4 & 5 & 6 & 7 \\ \downarrow & \downarrow & \downarrow & \downarrow \\ P_3 & 0 & 0 & 1 \end{array}$$

$$\boxed{P_3 = 1}$$

$\boxed{\text{So final Data } 0011001}$

Data  $\Rightarrow 1001 \Rightarrow 4\text{bits} \Rightarrow m=4$

$$\boxed{P_3=1}$$

$\boxed{\text{So final Data } 0011001}$

Receiver, Receive the Data  $\Rightarrow 0010001$

Actual Data  $\Rightarrow 0011001$

## # DETECTION and CORRECTION of ERROR

Bit Designation	P <sub>1</sub>	P <sub>2</sub>	M <sub>1</sub>	P <sub>3</sub>	M <sub>2</sub>	M <sub>3</sub>	M <sub>4</sub>
Bit Position	1	2	3	4	5	6	7
Binary Position	001	010	011	100	101	110	111
Received code	0	0	1	0	0	0	1

# First Parity check  $\Rightarrow 1\ 3\ 5\ 7$

$\Downarrow$   
0

$\underbrace{1\ 0\ 1}$   
All needs even, so parity bit should be 0, and it's 0.

Parity  $\Rightarrow$  Good  $\Rightarrow 0$  (LSB)

# Second Parity check  $\Rightarrow 2\ 3\ 6\ 7$

$\Downarrow$   
0

$\underbrace{1\ 0\ 1}$   
Good  $\Rightarrow 0$

# Third Parity check  $\Rightarrow 4\ 5\ 6\ 7$

$\Downarrow$   
0

$\underbrace{0\ 0\ 1}$  should be 1 for making even parity

So Parity is Bad  $\Rightarrow 1$  (MSB)

Error Position Code  $\Rightarrow 100$

Binary = 4

It shows bit in number 4 position is in Error

It is a 0, should be 1.

Correct code is  $\Rightarrow 0011001$
