

Selenium is a rapidly evolving framework, and new versions are released periodically to introduce new features, enhancements, and bug fixes. As of my knowledge cutoff in September 2021, here are some notable versions of the Selenium components mentioned in the introduction:

#### 1. Selenium WebDriver:

- Selenium WebDriver 4.0.0 (under development at the time of my knowledge cutoff)
- Selenium WebDriver 3.141.59 (stable release)

#### 2. Selenium Grid:

- Selenium Grid 4.0.0 (under development at the time of my knowledge cutoff)
- Selenium Grid 3.141.59 (stable release)

#### 3. Selenium IDE:

- Selenium IDE 3.10.0
- Selenium IDE 3.9.0

It's important to note that the versions mentioned above may not reflect the latest releases, as new versions may have been introduced since my knowledge cutoff in September 2021. I recommend visiting the official Selenium website or the Selenium GitHub repository to check for the most up-to-date information on the latest versions and releases of Selenium components.
